

Did you know that you can send faxes using Mod2? You can easily fax invoices, statements, packing details, and attachments to your customers and sales reps. Even though faxing is considered old school, it's still a widely used method for collection teams to produce results. Some companies still use fax to confirm orders.

Here at Mod2, we took faxing and made it new school. We are proud to introduce **Mod2 Cloud Faxing**, available right now for the price of FREE. That's right, we think this feature is so great that we have grandfathered all existing Mod2 users with it. Okay so the price is right but what does Cloud Faxing do? It lets you send faxes through Mod2 without the need of a phone line or modem! Using internet and cloud technologies, your fax will be uploaded to the cloud and delivered in seconds. There are no monthly fees for this service, no need for a dedicated phone line to fax out, and no additional hardware required. This can save your company \$30 or more per month if you have a dedicated fax-out line while at the same time making faxing faster, more reliable, and paperless.

Ready to join the new school? Simply contact us and we'll switch you from the classic fax system to Mod2 Cloud Faxing.
